

FEDERAL EMERGENCY MANAGEMENT AGENCY
NATIONAL FLOOD INSURANCE PROGRAM

POST CONSTRUCTION ELEVATION CERTIFICATE/FLOODPROOFING AND CONSTRUCTION

PERMIT NUMBER

JAMES R. & PHYLLIS MCMAHON POL.#FLD-0136-04/1-1 175007

INSTRUCTIONS

The registered professional engineer, architect, surveyor or community permit official completes Section I below. Section II may be completed by any of the professionals listed at the beginning of Section II, or by a similarly qualified local permit official. Print or type the information on this form. This form is to be used for new (CONSTRUCTION) construction and for substantial improvements to existing structures in Zones A1-A30, AH and V1-A30 and existing (EXISTING) buildings to be rated under POST-FIRM rules and rates.

SECTION I
(TO BE COMPLETED BY COMMUNITY PERMIT OFFICIAL)

SECTION II

INSTRUCTIONS

Complete only the Elevation Certification unless the building has been floodproofed at level to the zero flood elevation. If floodproofing is used, complete only the Floodproofing Certification. The Elevation Certification may be completed by a registered professional engineer, architect, or surveyor. The Floodproofing Certification may only be completed by a registered professional engineer or architect.

ELEVATION CERTIFICATION

I certify that the building at the property location described above has the lowest floor of an elevation of 14.25 feet, NGVD (mean sea level).

FLOODPROOFING CERTIFICATION

I certify to the best of my knowledge, information, and belief, that the structure is designed so that the structure is watertight to an elevation of _____ feet NGVD (mean sea level), with walls substantially impermeable to the passage of water and structural components having the capability of resisting hydrostatic and hydrodynamic loads and effects of buoyancy that would be caused by the flood depths, pressures, velocities, impact and uplift forces associated with the base flood.
In the event of flooding, will this degree of floodproofing be achieved with human injury risk?

Will the structure be occupied as a residence? . . .

If the answer to both questions is Yes, the floodproofing cannot be credited for rating purposes and the elevation certification must be completed instead.

*Floodproofed with human intervention means that water will enter the structure when floods up to the base flood level occur, unless measures are taken prior to the flood to prevent entry of water (e.g., bolting metal shutters over doors and windows).
